IAP2 Rec'd PCT/PTO 22 JUN 2006

CLAIMS

- 1. A method for producing non-2 µm-family plasmid protein comprising:
- 5 (a) providing a host cell comprising a 2μm-family plasmid, the plasmid comprising a gene encoding protein comprising the sequence of a chaperone protein and a gene encoding a non-2μm-family plasmid protein;
- (b) culturing the host cell in a culture medium under conditions that allow the co-expression of the gene encoding protein comprising the sequence of the chaperone protein and the gene encoding a non-2μm-family plasmid protein; and
- (c) purifying the thus expressed non-2µm-family plasmid protein from the cultured host cell or the culture medium.;
 - 2. The method of Claim 1 further comprising the step of formulating the purified non-2µm-family plasmid protein with a carrier or diluent and optionally presenting the thus formulated protein in a unit dosage form.

- 3. Use of a 2µm-family plasmid as an expression vector to increase the production of a fungal (preferably yeast) or vertebrate non-2µm-family plasmid protein by providing a gene encoding the non-2µm-family plasmid protein and a gene encoding a chaperone protein on the same 2µm-family plasmid.
- 4. A 2μm-family plasmid comprising a gene encoding a protein comprising the sequence of a chaperone protein and a gene encoding a non-2μm-family plasmid protein, wherein if the plasmid is based on the 2μm plasmid then it is a disintegration vector.
